

AURIGENE

PHARMACEUTICAL SERVICES

Custom Library Synthesis

Rapid synthesis of focused, mid-size compound libraries with high purities, using wide range of in-house available building blocks.

Capability for design & execution with quick access to inventory | Parallel synthesis, work up & purification | Mass directed purification systems for faster TAT

Why Aurigene Pharmaceutical Services?

Quick access to inventory

Fast turnaround time

Quick initiation of small libraries and scaffold synthesis

Parallel synthesis

Design and synthesis of partial PROTAC libraries

Capabilities:

- Standard transformations like amidations, reductive aminations, alkylations, C-C, C-O and C-N bond transformations etc.
- Heterocyclic chemistry including the synthesis of almost any 5 or 6 membered ring analogues.
- Scaffold synthesis in multigram scale for parallel diversification.
- Protection and deprotection strategies, customized for acid-mediated, neutral or base-mediated post-library works.
- Routine transition metal-mediated reactions including Suzuki, Stille, Heck etc have been executed in focused libraries.
- >80% success rate in many critical transformation like C-C, C-N bond and amide couplings
